

## **Concussion Gimmicks**

### **March 11, 2021**

In this seminar, Dr. Marshall goes over some of the gimmicks that he has seen in different groups, posted on social media, or has had people ask about.

Some things may not have the science yet, but it doesn't mean that it won't in the future. Dr. Marshall will look at what is known to not work, and what has limited evidence.

What does not work:

- Hyperbaric Oxygen therapy

What has limited evidence:

- Medication
- Imaging
  - MRI/CT
  - fMRI
  - DTI
  - SPECT
  - EEG
- LLLT (Low-level laser therapy)
- Red light therapy
- Chiropractic/Functional neurology
